For full schedule, including Center events, please see the Department Calendar:
http://www.chemistry.northwestern.edu/events/calendar.html

Monday March 11th:
Charles D. Hurd Lectures:
Dr. Jeffrey Bricker, UOP LLC, A Honeywell Company
Tech LR2
4:00-5:00pm

Tuesday March 12th:
Faculty Lunch Seminar: Tom Meade
Tech K140
12:00-1:00pm

Charles D. Hurd Lectures:
Dr. Jeffrey Bricker, UOP LLC, A Honeywell Company
Tech L211
4:00-5:00pm

Friday March 15th:
Graduate Student Recruiting Weekend

Arrivals

We did not have any new arrivals

BIP

BIP every Friday at 10:00 am in Tech K140

Announcements

The application window for the 13th annual Building Engineering and Science Talent (BEST) Symposium, hosted by The Dow Chemical Company, will be open March 1 - April 15, 2019.

The BEST symposium will be held in Midland, MI on July 30 – August 1, 2019. The BEST Symposium introduces doctoral students and post-doctoral scientists from U.S. ethnic minority groups (Hispanic, African American or Native American) to the wide range of rewarding careers in industrial research, particularly, the many opportunities available with Dow, where we create innovation at the intersection of chemistry, engineering, and physics. This conference, developed jointly by Dow’s minority scientists and Ph.D. recruiting team, supports the company’s commitment to a diverse and inclusive work force.

Applicants must be pursuing degrees in:
- Chemistry
- Chemical Engineering
- Materials Science
- Physics
For more information please visit the [website](#). All applications are due by April 15th, 2019.

**Opportunities**

**Hillsdale College** has an opening for a visiting assistant professor in physical chemistry. This will likely be a multi-year position (starting August 2019), and would be an excellent opportunity for a 2019 PhD grad with an interest in teaching in a liberal arts environment.

Contact: Matthew Young  myoung@hillsdale.edu

**The Indiana University Mass Spectrometry Facility** is seeking a Ph.D.-level Research Associate to oversee operations in its departmental shared-resource laboratory. Duties would include assisting full-time associate in maintaining GC-MS, LC-MS, and MALDI-TOF instrumentation, training researchers to use MSF equipment, and assisting clients in developing MS-based analytical methods. Former director of facility is available for mentoring and consultation during the appointment. More information about the facility including its instrumentation and capabilities can be found at [http://msf.chem.indiana.edu/](http://msf.chem.indiana.edu/). The initial appointment for this position will be for 12 months. Promotion in the non-tenured Scientist ranks available based on performance. A competitive salary and benefits package (health insurance, 403b plan, etc.) will be offered.

Basic Qualifications: Candidates are required to have a Ph.D. in analytical chemistry, organic chemistry, biochemistry, or any related discipline. Experience using and/or maintaining modern GC-MS or LC-MS equipment is essential to succeed in this position. H-1B sponsorship is not available for this position.

Questions regarding the position or application process can be directed to: Dr. Jonathan A. Karty, Department of Chemistry, Indiana University, 800 E. Kirkwood Avenue, Bloomington, IN  jkarty@indiana.edu or Prof. Lane A. Baker, lanbaker@indiana.edu.

Additional Qualifications: Research experience in small molecule characterization and quantification is desirable. The ideal candidate should have experience working with multi-disciplinary teams and be able to communicate well with individuals of limited experience with mass spectrometry. Experience in metabolomics (LC-MS-MS or GC-MS) is highly desired. Experience diagnosing problems with analytical instrumentation is also helpful.

Interested candidates must send a cover letter, curriculum vitae including a list of publications, and three references to [http://indiana.peopleadmin.com/postings/7299](http://indiana.peopleadmin.com/postings/7299). Applications will be reviewed upon receipt. For best consideration please apply before April 1, 2019.

The College of Arts and Sciences is committed to building and supporting a diverse, inclusive, and equitable community of students and scholars.

Indiana University is an equal opportunity, affirmative action employer and a provider of ADA services. All qualified applicants will receive consideration for employment without regard to age, ethnicity, color, race, religion, sex, sexual orientation, gender identity or expression, genetic information, marital status, national origin, disability status or protected veteran status.

**The National Renewable Energy Laboratory (NREL)** is a leader in the U.S. Department of Energy’s effort to secure an energy future that is both environmentally and economically sustainable. With locations in Golden, Boulder and Washington D.C., NREL is the primary laboratory for research, development and deployment of renewable energy technologies in the United States. The NREL mission is to develop renewable energy and energy efficient technologies and practices, advance related science
and engineering, and transfer knowledge and innovation to address the nation’s energy and environmental goals.

NREL’s Chemistry and Nanoscience Department has an opening for a Postdoctoral Researcher specializing in quantum dot film fabrication and characterization. The successful applicant will have expertise in synthesizing semiconductor nanocrystals and fabricating conductive QD arrays. The successful candidate should be familiar with standard characterization such as ultrafast spectroscopy, conductivity measurements and solar cell characterization. Additionally the successful applicant should have expertise in data analysis, simulation of experimental results and writing of manuscripts. The successful applicant will have the ability to work with material scientist to probe and understand surfaces and interfaces of newly developed chemistries and heteroarchitectures.

Basic Qualifications
Must be a recent PhD graduate within the last three years.

Additional Qualifications
Preferred Qualifications
Our ideal candidate will have just received a Ph.D in physics, chemistry, optics, or the equivalent, as well as having experience working with quantum dots and methods, data collection, and simulating experimental results. Experience fabricating conductive quantum dot arrays, new quantum dot systems, core/shell and synthesizing other shapes is also desired. Direct experience with QD systems.

Submission Guidelines
Please note that in order to be considered an applicant for any position at NREL you must submit an application form for each position for which you believe you are qualified. Applications are not kept on file for future positions. Please include a cover letter and resume with each position application.

**The National Renewable Energy Laboratory (NREL),** located at the foothills of the Rocky Mountains in Golden, Colorado, is the nation’s primary laboratory for research and development of renewable energy and energy efficiency technologies. A postdoc position is available in the Materials Science Center, in the area of thin film synthesis and characterization of novel materials for application in next-generation Li-ion battery technologies

The position would support a collaborative project on solid-electrolyte interphases (SEI) of Si-based anode materials in Li-ion batteries. Specific duties would involve physical vapor deposition (e.g., magnetron sputtering, pulsed laser deposition) of thin films that can be used as model systems for such studies. The work would also include studying solid state components of the SEI, such as lithium silicate, lithium silicide, and other constituents, as well as developing artificial layers that can help understanding the SEIs. The job duties would also include maintaining existing experimental synthesis equipment and protocols, as well as setting up new characterization tools compatible with thin film sample studies.

Basic Qualifications
Must be a recent PhD graduate within the last three years.

Additional Qualifications
Preferred Qualifications
Successful candidates should have prior experience in materials research for battery applications, solid understanding of the underlying electrochemical processes, and proven track record with electrochemical and spectroscopic characterization instruments. Other preferred skills include hands-on experience with thin film synthesis (sputtering, pulsed laser deposition, molecular beam epitaxy) and thin film
characterization (chemical, structural, microscopic). Prior experience with automation of instruments and
development of software would be a plus.

Required Knowledge Skills and Attributes

Submission Guidelines

Please note that in order to be considered an applicant for any position at NREL you must submit an
application form for each position for which you believe you are qualified. Applications are not kept on
file for future positions. Please include a cover letter and resume with each position application.

https://nrel.wd5.myworkdayjobs.com/en-US/NREL/job/Golden-CO/Postdoctoral-Researcher--Thin-Film-
Materials-for-Li-ion-Battery-Research_R3673

NREL’s Transportation and Hydrogen Systems Center has a research position available in battery life
testing and life-predictive modeling. The selected candidate will be responsible for conducting aging tests
on Li-ion batteries and developing aging models of batteries capturing electrochemical degradation
mechanisms, validating and integrating those models within NREL’s computational battery modeling
frameworks. The selected candidate will develop new and apply existing battery simulation software to
investigate and optimize performance and lifetime of lithium-ion batteries for electric-drive vehicles and
renewable energy applications. The selected candidate will further be responsible for developing new
experimental techniques to isolate aging mechanisms. This position will support R&D conducted in-
house and externally by NREL researchers and university and industry participants.

Job Duties

Job duties include, but not limited to:

- Design and carry out life-cycle experiments to measure Li-ion battery capacity fade and
  resistance growth under different storage and charge/discharge aging conditions.
- Use existing in-house software to perform parameter identification and develop life models of
  multiple Li-ion battery technologies. Integrate those life models into other
  technoeconomic/systems analysis models. Support vehicle and grid energy storage lifetime and
  control studies.
- Work with team to formulate physics models of electrochemical/mechanical degradation
  mechanisms and integrate those models into NREL’s multi-scale multi-domain (MSMD) battery
  modeling software.
- Develop new experiments, test fixtures and test procedures to isolate and quantify individual
  degradation mechanisms. Use data to validate degradation physics models.
- Tear down aged cells. Work with team and external partners to carry out supporting chemical
  analysis and microscopy studies of aging behavior.
- Improve performance and lifetime of Li-ion battery units through simulation-based analysis.
- Document work in detailed technical memos, laboratory notebooks, milestone reports, and
  journal articles and present at technical conferences.

Required Education, Experience, and Skills

Must be a recent Ph.D. graduate within the last three years.

Preferred Qualifications

Demonstrated research capability to solve challenging problems. Experience with battery
galvanostatic/potentiostatic and electrochemical impedance spectroscopy tests and equipment. Familiarity
with cell tear-down and fabrication procedures, chemical, structural, tomography and microscopy analysis
techniques. Programming experience in C, C++, MATLAB, Python, LabView, and/or dSPACE.
Knowledge of Modbus, CAN, J1939 and other communication protocols. Familiarity with commercial
finite element analysis (FEA) software packages such as COMSOL and ANSYS, and/or computational
fluid dynamics (CFD) software such as FLUENT and STAR-CCM+. Understanding of numerical
solution of partial differential equations. Previous research or practical experience proposing, formulating and solving physics-based models of multi-scale reaction-transport systems such as lithium-ion batteries. Prior experience developing tests to validate those models. Experience designing laboratory experiments and analyzing data. Excellent interpersonal, communication, writing and documentation skills. Demonstrated team work, creativity, innovation, and adaptability.

**Desired Education, Experience, and Skills**

- PhD. in relevant chemistry, electrochemistry, mechanical, chemical engineering or related discipline with 3.0 GPA or higher.
- Experience conducting aging test campaigns on Li-ion cells, including custom fixture design, setting up tests, programming battery cyclers and monitoring, reducing, interpreting and presenting data.
- Experience in modeling and simulation of thermal, chemical, and electrochemical energy storage devices or systems.
- Experience in modeling degradation and lifetime of Li-ion batteries.
- Programming experience in Matlab.

Submission Guidelines

Please note that in order to be considered an applicant for any position at NREL you must submit an application form for each position for which you believe you are qualified. Applications are not kept on file for future positions. Please include a cover letter and resume with each position application.

**A Synthetic Organic Medicinal Chemistry Postdoctoral position** available in the Lapinsky lab (http://www.duq.edu/academics/faculty/david-lapinsky) in the Division of Pharmaceutical Sciences at Duquesne University in Pittsburgh, PA (http://www.duq.edu/). The position is open immediately, with start dates through late 2019 being given consideration.

The Postdoc will address the major theme in the lab of developing chemical probes for target identification of hit compounds originating from phenotypic screening campaigns.

What we do: Our recent activities are summarized on the website:
http://www.duq.edu/academics/faculty/david-lapinsky

The interested candidate:
- must hold a Ph.D. in organic or medicinal chemistry, or a related field (e.g., chemical biology).
- must have strong expertise in organic synthesis, with a publication record demonstrating independence in research focus
- must have the ability to communicate clearly in writing, as well as verbally with a diverse set of collaborators
- must have a strong team spirit and excellent interpersonal skills
- must have excellent synthetic organic chemistry experience, literature search skills, and be able to derive the best routes for organic syntheses; additionally, the candidate should be knowledgeable in analytical methods of organic chemistry (e.g., NMR, MS, chromatography, etc.)

Eligibility: Completion of a Ph.D. is required by start date.

How to apply: Applications will be accepted immediately and candidates will be considered until the position is filled. To be considered, all applicants must submit a cover letter, CV, a one-page “Research
Statement” describing research experience and how this aligns with the focus of the Lapinsky group, and the names/phone numbers of three references. A single PDF document should be sent to Dr. David Lapinsky (lapinskyd@duq.edu). Salary will be commensurate with accomplishment, fit, and experience.

The environment: Located in Pittsburgh, Duquesne University provides a rich intellectual environment and cutting-edge facilities for its researchers, who conduct studies at the forefront of basic biomedical science, drug discovery, and technology development.

UES, Inc in Dayton, Ohio has an opportunity available for a research scientist to join our team working with the 711th Human Performance Wing at Wright Patterson Air Force Base. This position will support research in the area of sensor development related to the selection of recognition elements (peptides and nucleic acids) using high throughput instrumentation and their integration in different sensor platforms. Experience in the synthesis and characterization of nanomaterials and their use in assay development is required, as well as experience with handling biomaterials (DNA, RNA, etc.). Knowledge of techniques to select DNA and peptides recognition elements is beneficial, but not essential. Some of the primary functions for this role will include:

- Conducting lab experiments related to selection of recognition elements
- Characterization of binding affinity and integration of binders and sensors
- Supporting collaborations with external partners
- Presentations of results at meetings and conferences

Requirements

- Ph.D. in chemistry, biochemistry, nanotechnology or a related discipline is required
- Proficiency with general chemistry and biochemistry laboratory techniques is required
- Experience with nucleic acid and peptides binding, synthesis, and characterization of nanomaterials is required
- Knowledge of sample preparation techniques for sensor systems is desired
- This position will require strong verbal and written communication skills and the ability to work in a multidisciplinary team environment
- This position is working within a government facility and requires U.S. Citizenship

Additional Information

UES, Inc. is an innovative science and technology company providing customers with superior research and development expertise since its inception in 1973. Our long-term success is a direct result of a strong commitment to the success of our employees. We look forward to reviewing your application.

UES is firmly committed to Equal Employment Opportunity (EEO) and prohibits employment discrimination for employees and applicants based on age, race, color, pregnancy, gender, gender identity, sexual orientation, national origin, religion, marital status, citizenship, or because he or she is an individual with a disability, protected veteran or other status protected by federal, state and local laws.
